

Stakeholder Requirements Document: Olist E-Commerce Platform

BI Professional: Praveen S

Client/Sponsor: Head of Growth, Olist

Business problem:

We lack a consolidated, data-driven understanding of our marketplace performance across customers, sellers, orders, and payments — making it impossible to prioritize the right growth levers, fix operational bottlenecks, or retain our most valuable stakeholders (both buyers and sellers) at scale.

Stakeholders:

- Head of Growth, Olist

Stakeholder usage details:

Despite our growth, the leadership team is facing mounting pressure. We are heading into our **annual strategic planning cycle**, and the board is asking hard questions we don't have clean answers to yet. Specifically:

- We **don't fully understand where our revenue is coming from** — which sellers, which categories, which regions are actually driving the business vs. just adding operational noise
- We are **losing customers after their first purchase** and we don't know why or where exactly it's happening
- Our **operations team is getting complaints** about delivery performance, but we lack a clear picture of how widespread the problem is and whether it's regional or carrier-related
- We've been **spending marketing budget broadly** without knowing which customer segments or geographies deserve more investment
- Several of our **top sellers have quietly churned** in recent quarters, and retention of high-value sellers is becoming a boardroom concern

Business Goals

Goals	Success Metrics
Understand revenue concentration and diversification	Know which top % of sellers/categories drive what % of revenue
Improve customer retention	Identify where and why customers are not returning
Fix delivery experience	Pinpoint states, routes, or periods with chronic delays
Smarter regional expansion	Know which geographies are underserved but high-potential
Protect our seller base	Identify at-risk or underperforming sellers before they churn

Key Business Questions

Revenue & Sales Performance

1. Which product categories and sellers contribute the most to overall revenue — and how concentrated is that dependency?
2. Are there seasonal or monthly patterns in order volume and revenue that we should be planning around?
3. What is the average order value, and how does it vary across product categories?

Customer Behaviour & Retention

4. What percentage of our customers are one-time buyers vs. repeat buyers?
5. Which states or cities have the highest customer concentration — and are we over-indexed in certain regions?
6. Is there a relationship between delivery experience and whether a customer comes back?

Operational & Delivery Performance

7. How often are orders delivered late vs. on time — and is this getting worse over time?
8. Which states or regions consistently experience the worst delivery delays?
9. Is there a gap between the estimated delivery date we promise customers and the actual delivery date?

Seller Performance

10. What does the distribution of sellers look like — are a small number of sellers carrying a disproportionate share of volume?
11. Are there sellers with high order volume but poor delivery or fulfilment metrics that could be damaging our brand?
12. Which seller locations (states) are underrepresented relative to where our customers are?

Payments & Monetisation

13. What payment methods are customers preferring — and are there friction points we should address?
14. Are customers using installment payments heavily, and what does that tell us about purchasing power across segments?
